Ginkakuji Silver Pavilion
Location: Kyoto, Japan
Build: 1484
Influence: Culture

Monk's Garden
Location: Boston, MA
Build: 2013
Influence: Form

The description that I found in Kyoto, Japan was amazing. I went to see the Ginkakuji Silver pavilion, which was facing west, facing the garden's water and pond area. The garden is a perfect example of early Śūraṅga-ryū and depicted as a series of small, connected pools with multiple water features including a pond and waterfall. The path changes from small stones to larger stones in the upper area, and the path is stepped along with a lot of natural elements. This garden has a lot of raked gravel areas, which are a very natural water and stone. I also noticed the small features in the garden which change from small stones to larger stones in the upper area. The path is stepped along with a lot of natural elements. This garden has a lot of raked gravel areas, which are a very natural water and stone. The garden is a perfect example of early Śūraṅga-ryū and depicted as a series of small, connected pools with multiple water features including a pond and waterfall.
